Staff Scientist – Hematology (Job 34483)
Are you interested in gene therapy research?
Do you have experience with hematopoietic stem cells, lentiviral vectors, TALENS, CRISPRs/Cas9 systems?

St. Jude Children’s Research Hospital needs your skills. St. Jude Children’s Research Hospital is looking for a Staff Scientist to be part of the team and work in the development of gene therapy and genome editing approaches to non-malignant hematological disorders by specifically correcting human hematopoietic stem cells. The ideal candidate will also have strong molecular biology background, and experience working with genome editing tools, primary hematopoietic cells, and murine transplant models.
