Postdoctoral Position in Pancreatic Cancer Research

A POSTDOCTORAL POSITION is available to study molecular mechanisms that promote pancreatic tumor formation. The candidate will use mouse models and primary tumor cells generated in our laboratory, 3D-cultures and pharmacological approaches, to investigate how ATM deficiency enhances metastatic potential in pancreatic cancer cells. Highly motivated candidates who recently obtained a PhD or MD degree and have a strong background in molecular and cancer biology are encouraged to apply. Expertise in basic cancer and mouse techniques is required for this position.

Interested individuals should send their curriculum vitae, a brief description of their research interests, and the names of three references to:

Beatriz Sosa-Pineda, PhD
Associate Professor
Department of Medicine
Northwestern Feinberg School of Medicine, Chicago
