Postdoctoral Position in Pancreas Organogenesis and Pancreatic Diseases

A POSTDOCTORAL POSITION is available to study molecular mechanisms regulating development, plasticity and homeostasis in the mammalian exocrine pancreas. The candidate will use available mouse models, organoid cultures, ChIPseq, and iPSC approaches, to investigate the former processes. Highly motivated candidates who recently obtained a PhD or MD degree and have a strong background in mouse development and molecular biology are encouraged to apply.

Interested individuals should send their curriculum vitae, a brief description of their research interests, and the names of three references to:

Beatriz Sosa-Pineda, PhD
Associate Professor
Department of Medicine
Northwestern Feinberg School of Medicine, Chicago
